SUMMARY

Data Scientist with Python, SQL, machine learning, experimentation, and data-platform experience across fictional analytics products, forecasting projects, and operational decision systems.

EXPERIENCE

Data Science Associate Jan 2024 - Present
Northstar Analytics B.V.

- Built forecasting and classification workflows for fictional retail and logistics datasets.
- Developed tested Python services, SQL models, monitoring checks, and review dashboards.
- Partnered with product and operations teams to define metrics and evaluate experiments.
- Documented assumptions, data limitations, and reproducible validation procedures.

Graduate Research Assistant Sep 2021 - Dec 2023
Riverview Institute of Technology

- Supported applied statistics, Python, databases, and machine-learning coursework.
- Guided student teams through data preparation, model comparison, and reporting.
- Reviewed analyses for reproducibility, clear interpretation, and responsible data use.

PROJECTS

Orion Demand Forecasting Platform

- Designed batch pipelines for synthetic sales, inventory, promotion, and calendar data.
- Compared statistical baselines with gradient-boosted models using rolling validation.
- Added drift checks, prediction intervals, experiment tracking, and automated tests.
- Presented forecast errors and planning scenarios in a lightweight stakeholder dashboard.

HarborFlow Process Analytics

- Modelled synthetic event logs to measure variants, waiting time, rework, and bottlenecks.
- Built data-quality rules and documented the limits of incomplete operational records.
- Delivered repeatable SQL reports and clear visual summaries for process owners.

Beacon Risk Classification Pipeline

- Trained models on an invented transaction dataset with temporal validation and tuning.
- Packaged inference behind a small API with monitoring, tests, and CI automation.
- Evaluated precision-recall tradeoffs and recorded manual-review thresholds.

EDUCATION

MSc Applied Data Science 2021 - 2023
Riverview Institute of Technology

- Thesis: Robust Forecast Evaluation Under Synthetic Distribution Shift.
- Coursework: machine learning, data engineering, statistics, visualization, optimization.

BSc Computational Analytics 2018 - 2021
Westbridge College

- Capstone: Interpretable Classification for Simulated Customer-Service Requests.
- Coursework: programming, databases, linear algebra, probability, software engineering.

SKILLS

Programming: Python, SQL, pandas, scikit-learn, FastAPI, Git

Machine Learning: classification, forecasting, feature engineering, model evaluation

Data and MLOps: PostgreSQL, ETL, data quality, experiment tracking, Docker, CI

Analytics: statistics, A/B testing, dashboards, process analytics, stakeholder reporting

LANGUAGES

Dutch (Fluent), English (Fluent), German (Intermediate)
